

FOR IMMEDIATE RELEASE

Hello, Milton Keynes, We Have Arrived.

Milton Keynes, U.K. — After nearly 50 years of solely developing shades in the United States, MechoSystems has arrived in the United Kingdom. And in a fully functional fashion.

MechoSystems has been commercially present in the United Kingdom (and all of Europe) for two decades. In its most recent, notable project in London the company installed its software-driven, automated-shading control system, SolarTrac®, for The Shard's 11,000—differing—panes of glass. This project was customized and completed from MechoSystems' Headquarters in New York. Now MechoSystems at Milton Keynes is providing technical, manufacturing, and commercial operations.

The facility looks to provide its clients in the UK and Europe with everything the company offers from the United States, but with more accessibility combined with local knowledge. The new Milton Keynes location is open and eager to solve your business' window-covering problems—complicated or not:

- Manually operated roller shades.
- Electrically operated roller shades.
- Sun-tracking and PC-based automated shading systems.
- Roller-screen and lighting systems and controls.
- A/V and room-darkening solutions.
- Eco-friendly solar shade cloths with various styles and openness factors.
- Customized shading and specialty window shades.
