

FOR IMMEDIATE RELEASE

MechoSystems' UrbanShade® at Ecobuild

Milton Keynes, UK – MechoSystems exhibited its UrbanShade roller blind systems at the 2013 Ecobuild trade fair in London.

UrbanShade is a compact (70 x 70mm/2-3/4 x 2-3/4 in.), value priced system. It is available as a manually operated or low voltage, motorised roller blind system. It can be controlled by wireless remote, with a wall or handheld switch or fully automated, with MechoSystems' WindowManagement® Systems. Other options include integration with 3rd party systems, multiple fascia choices with colour coordinated components and various MechoSystems shade cloth series.

The UrbanShade System provides maximum aesthetic flexibility, and a simple install at the job site to either a ceiling, wall or jamb mount. The system can be assembled on site, or delivered in a prefabricated cassette that just attaches to the wall – or to the ceiling or jamb.

An Expanded UrbanShade Family

The UrbanShade Double Bracket is a two roller blind system. A single bracket holds two individual tubes with two roller blinds, eliminating the need for two separate brackets. The ultra low profile configuration allows any combination of (1) two motorised, (2) two manual or (3) one motorised and one manual roller shade to be mounted in a 133 x 133mm (5-1/4 x 5-1/4 in.) footprint. The system darkens a room for maximum privacy, or allows views to the outside with solar protection by raising only the opaque shade cloth.

Features of the UrbanShade Double Bracket System:

- Operates manually with wired, low voltage motors, or with battery powered motors.
- Changes from manual to motorised at a later date with convertible option.
- Decreases labour and installation time and costs.
- Is available in a variety of colours, or shade cloth wrapped to match your roller blinds.

UrbanShade Double can be completed with MechoSystems' square fascia, or with radius fascia for a softer look.
